BACKGROUND:

Around the world, every wealthy nation except the United States achieves universal health care through some variation of a single payer model. All other nations spend far less than we do and in return receive higher quality health care and more of it. California families and employers can no longer afford to foolishly waste 30% of every health care dollar on a private insurance bureaucracy designed to minimize the payment of claims instead of maximizing the health of the people.

Single Payer Healthcare would dramatically increase patient choice and provider competition by guaranteeing every Californian total choice over his or her doctors and hospitals instead of the narrow provider networks that restrict choice today. This legislation will help middle and lower income families and businesses that are the backbone of California’s economy. It will create jobs, ease the burden on California’s budget and improve health care for every single Californian.
